Acknowledgments

The authors thank the eCornell AI in Finance program participants for discussions that motivated the downstream-use bias-correction analysis, and Polygon.io for access to the 2014 to 2024 United States equity and exchange-traded-fund daily price histories used in the experiments. Computations were run on a single laptop; no shared-resource allocation was required.

CRedit authorship contribution statement

Abdulrahman Alswaidan: Conceptualization, Methodology, Software, Investigation, Validation, Writing - original draft, Writing - review and editing.
Jeffrey D. Varner: Conceptualization, Methodology, Software, Investigation, Validation, Writing - original draft, Writing - review and editing.

Declaration of competing interest

The authors declare that they have no known competing financial interests or personal relationships that could have appeared to influence the work reported in this paper.

Email addresses: aa2725@cornell.edu (Abdulrahman Alswaidan), jdv27@cornell.edu (Jeffrey D. Varner)

Code and data availability

The experiment scripts, evaluation harness (six-composer benchmark, Value-at-Risk coverage check, and bias-correction utility), and fitted per-asset marginals are available in the [paper repository](#). The underlying model-fitting library is available in the [JumpHMM.jl repository](#) and is pinned as a dependency of the experiment code.

Color reproduction

All figures should be reproduced in color in both the online and print versions of the article.
